Ambient ter	mperature range	°C 20 / +50		
Fluid tempe	erature range	°C	20 /	+80
Fluid viscos	sity range	cSt 10 ÷ 400		
Recommen	ded viscosity	cSt 25		
Fluid conta	mination degree	according to ISO 4406:1999 class 20/18/15		
Mass:	single solenoid valve double solenoid valve	kg kg	1,5 2	1,35 1,8

#### **OPERATING PRINCIPLE**

Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401 (CETOP RP121H) standards.

The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see par. 7).

The valve is supplied with 3 or 4 ways designs, with 2 or 3 positions and with several interchangeable spools with different porting arrangements.

The valve is available with DC or AC solenoids. DC solenoids can also be fed with AC power supply, by using connectors with a built in rectifier bridge (see paragraph 7.2).

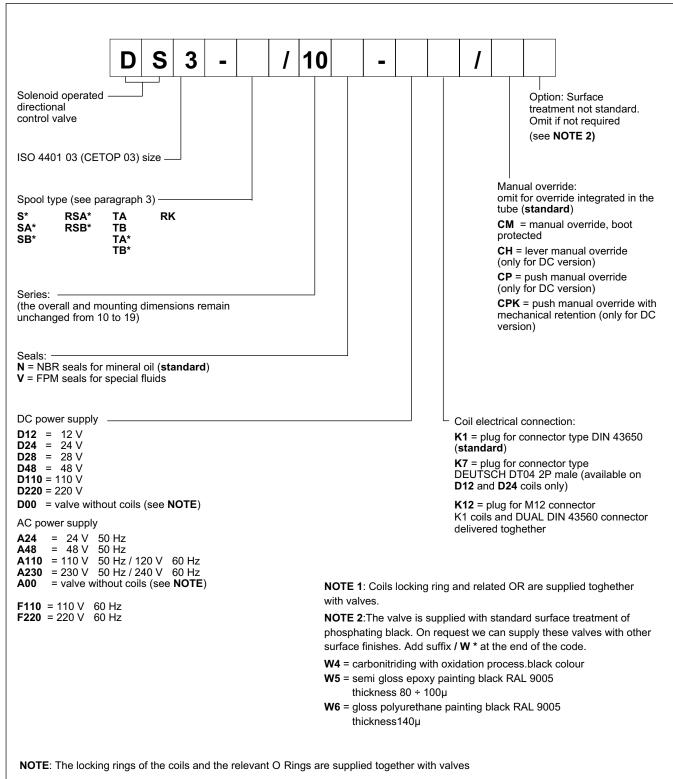

The DC solenoids DS3 directional valve is also available with connection DUAL DIN 43650.

The DC solenoids DS3 directional valve is also available in the versions with soft shifting (see par. 14) and with lever manual override.

41 150/110 ED 1/14

#### 1 - IDENTIFICATION CODE

#### 2 - HYDRAULIC FLUIDS

Use mineral oil based hydraulic fluids HL or HM type, according to ISO 6743 4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

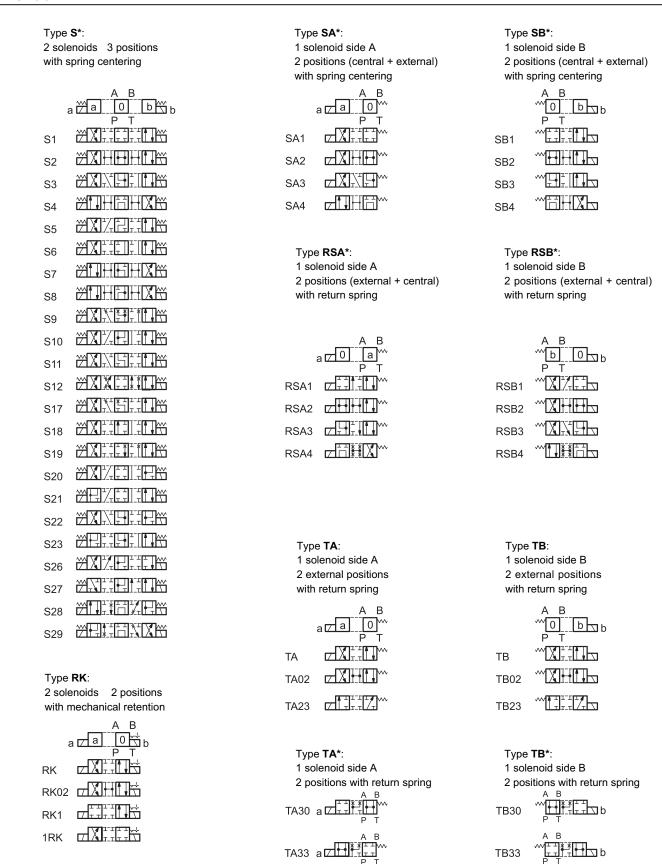

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

41 150/110 ED **2/14** 

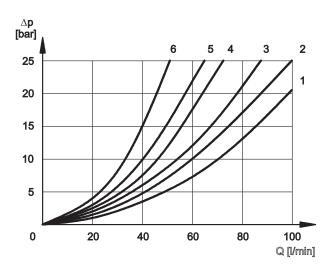

#### 3 - SPOOL TYPE

Besides the diagrams shown, which are the most frequently used, other special versions are available: consult our technical department for their identification, feasibility and operating limits.

#### **4 - PRESSURE DROPS** $\Delta p$ **-Q** (obtained with viscosity 36 cSt at 50 °C)

For pressure drops between A and B lines of spools S10, S20, S21, S22 and S23, which are used in the regenerative diagram, refer to curve 5.

DS<sub>3</sub>

#### 6 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

NOTE: The values indicated in the graphs are relevant to the standard solenoid valve. The operating limits can be considerably reduced if a 4-way valve is used with port A or B plugged.

For flow and pressure performances of soft-shifting configuration see paragraph 14. For DC solenoid valves fed with AC by means of connectors with built-in rectifier bridge, see paragraph 7.2

41 150/110 ED 5/14

#### 7 - ELECTRICAL FEATURES

#### 7.1 Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated  $360^{\circ}$ , to suit the available space.

#### Protection from atmospheric agents CEI EN 60529

Plug in type	IP 65	IP 67	IP 69 K
K2 AMP JUNIOR	х	x (*)	
K7 DEUTSCH DT04 male	х	х	x (*)
K12 DUAL DIN 43650	х	x (*)	

<sup>(\*)</sup> The protection degree is guaranteed only with the connector correctly connected and installed

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	18.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) (NOTE)	In compliance with 2004/108/CE
LOW VOLTAGE	In compliance with 2006/95 CE
CLASS OF PROTECTION :	
Coil insulation (VDE 0580)	class H
Impregnation: (DC valve)	class F
(AC valve)	class H

**NOTE**: In order to further reduce the emissions, with DC supply, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

## 7.2 Current and absorbed power for DC solenoid valve

The table shows current and power consumption values relevant to the different coil types for DC.

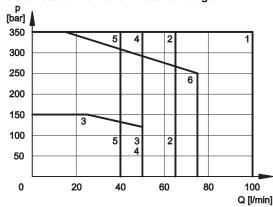

The rectified current supply takes place by fitting the valve (with the exception of D12 coil) with an alternating current source (50 or 60 Hz), rectified by means of a bridge built in to the "D" type connectors (see cat. 49 000), by considering a reduction of the operating limits (see diagram below).

#### Coils for direct current (values ±5%)

	Nominal	Resistance	Current	Power	Coil	code

#### 9 - OVERALL AND MOUNTING DIMENSIONS FOR AC SOLENOIDS VALVES

dimensions in mm

1	Mounting surface with sealing rings
2	Standard manual override included in the solenoid tube
3	Coil (90° revolving)
4	Coil removal space
5	DIN 43650 electrical connector to be ordered separately (see cat. 49 000)
6	Connector removal space

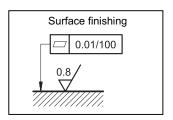

See par. 16 for fastening bolts and sealing rings

41 150/110 ED 8/14

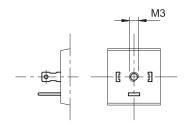

#### 10 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves without springs and with mechanical detent must be mounted with the longitudinal axis horizontal. Valve fixing takes place by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity and/or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

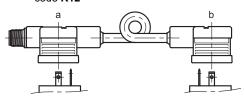

#### 11 - ELECTRIC CONNECTIONS

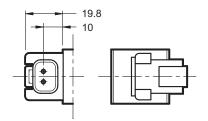

connection for DIN 43650 connector type code **K1** (standard)

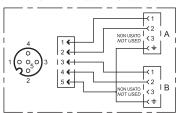

connection for DUAL DIN 43650 connector type code **K12** 

connection for DEUTSCH DT04 2P male connector type code **K7** 

CONNECTOR M12x1 CONNECTION SCHEME

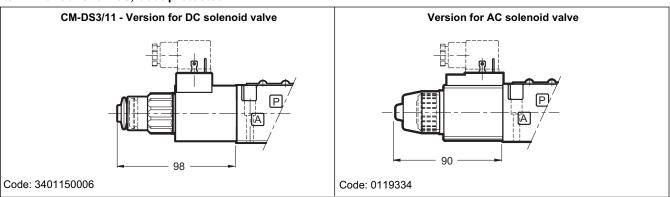

In K12 version the valve will be delivered toghether with the connector DUAL DIN 43650 with M12 connection already mounted on K1 coils. DUAL DIN connector allows you to power two solenoids with a single cable with socket M12.

#### 12 - ELECTRIC CONNECTORS

The solenoid operated valves are delivered without connector, except the version K12, where the connector is delivered toghether with the valve. For coils with standard electrical connections K1 type (DIN 43650) the connectors can be ordered separately. For the identification of the connector type to be ordered please see cat. 49 000. For K2, K7 and K8 connection type the relative connectors are not available.

#### 13 - MANUAL OVERRIDES

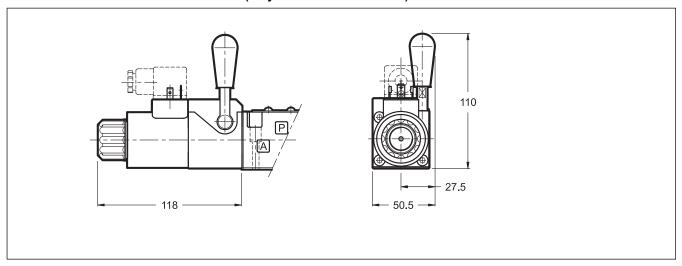

#### 13.1 - Manual override, boot protected

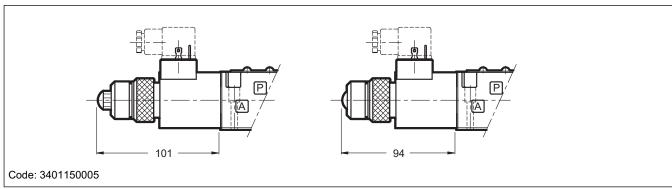

41 150/110 ED 9/14

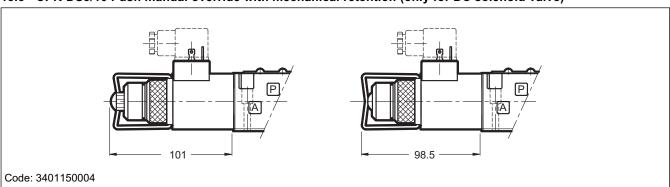

#### 13.2 - CH-DS3/10 Lever manual override (only for DC solenoid valve)

#### 13.2 - CP-DS3/10 Push manual override (only for DC solenoid valve)

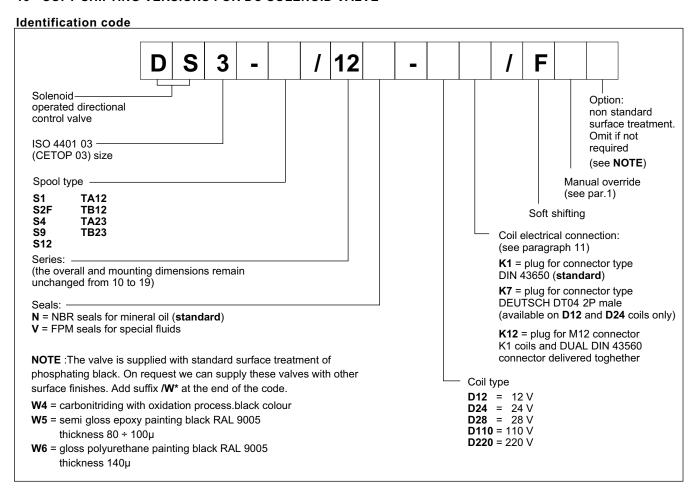

#### 13.3 - CPK-DS3/10 Push manual override with mechanical retention (only for DC solenoid valve)

41 150/110 ED 10/14

#### 13 - SOFT-SHIFTING VERSIONS FOR DC SOLENOID VALVE

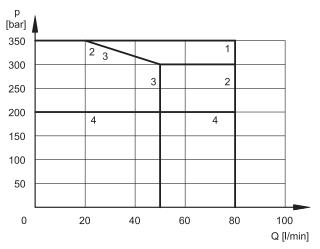

This version enables hydraulic actuators to perform a smooth start and stop by reducing the speed of movement of the valve speed

The diagram on the side shows the operating limits of the spools available in the soft shifting version (**NOTE**: for this version, the S9 spool must be used instead of the S3 one).

The table on the side shows the switching times. The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

The shifting time and characteristics curves, are influenced by the viscosity (and thus by the temperature) of the operating fluid. Moreover, times can vary according to the flow rate and operating pressure values of the valve.

For the correct functioning of the soft shifting, ensure that the solenoid tubes are always filled with oil. For this purpose, we recommend to install a backpressure valve set at 1  $\div$  2 bar on T line.

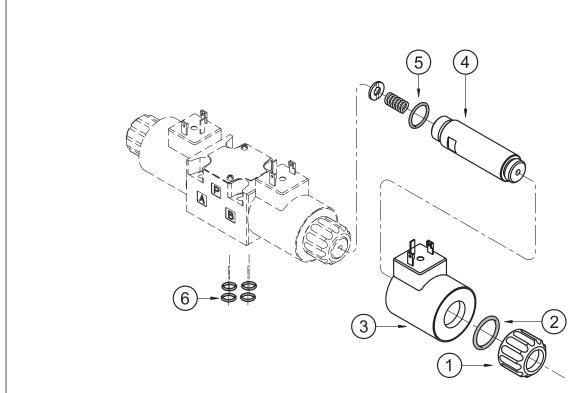

SPOOL	CURVE		TIMES [ms]		
	РΑ	ΡВ	ENERGIZING	DE ENERGIZING	
S1, S12	1	1	350	200 ÷ 300	
S2F	3	3	400	100 ÷ 250
